10. (TWICE AMENDED) A base lid comprising in combination:
a body having a bottom wall and a side wall;
said side wall having an interior surface and exterior surface, the interior surface of the
15 wall defining the opening;
said body consisting of a tab positioned on the side of the body;
the defining opening created by the body, side wall, and bottom defining a round
opening.;
an interior wall with recessed and protruding areas;
20 said interior wall thickness increases at a linear slope rate from the lid opening toward the
bottom of the base lid defining an angular slope toward the exterior wall and defining a
protrusion at a small radial arc, said interior wall thickness then decreases at a linear rate
defining an angular slope toward the exterior wall, and then remains at a constant wall

thickness until the base wall is reached;

said linear rate creating an interior protrusion is between 10 degrees and 20 degrees.
